

# Thermophotovoltaic Generation of Electricity: 3rd NREL Conference (AIP Conference Proceedings)

This third National Renewable Energy Laboratory conference, a venue for industry, academia, and federal labs to communicate research findings, demonstrates that there is a vigorous R&D community and an embryonic industry forming that could be of great importance to the Nation, both militarily and for non-military projects. Topics covered at this conference include papers on GaSb and its related ternary and quaternary alloys, the back surface reflector technique for recirculating sub-bandgap photons, and various other technologies.
