Language: English Publisher: Sichuan University Press polyatomic complex system theory and application of reaction kinetics (English) as an important part of the Earth's atmosphere. ozone (O_3) molecular protective effect on Earth's ecological environment is very important. System to understand its characteristics, thereby establishing the reaction mechanism and kinetic model of ozone in the atmosphere is one of the world focus research (National Key Basic Research and Development Program. has the stratosphere power - physical - chemical processes with trends and changes in the ozone layer of the stratosphere environmental prediction as the direction of the important support of 2009). The establishment of the kinetic model involving a large number of multi-atom collisions in the atmosphere response. Two representative reaction series is t...
