

Adaptive optics has been under development for well over 40 years. It is an indisputable necessity for all major ground-based astronomical telescopes and is the foundation for laser and wavefront sensor design. *Lighter Side of Adaptive Optics* is a nontechnical explanation of optics, the atmosphere, and the technology for untwinkling the stars. While interweaving a fictional romantic relationship as an analogy to adaptive optics, and inserting satire, humor, and philosophical rants, Tyson brings a difficult scientific topic to its knees. The why and how of adaptive optics has never been more enjoyable.
