

The Theory of Everything Solved: The Four Fundamental Forces Of Nature Can Be Explained By Using Only Three Particles

By using only three particles you can connect the four fundamental forces of nature. These particles are the neutral particles of matter that make up the atoms nucleus. And the north and south particles, that make up magnetism. These are the same particles that make up all forms of energy. That includes gravity and Dark matter or ether, magnetism light gamma and x-rays. The laws of physics are simple. The north and south particles that make up magnetism, and the neutral particles of matter that make up the atoms nucleus. Are the building blocks of the universe.
