

A business gateway to solar energy: An innovative approach to tackle energy deficiency in Pakistan

The power crisis in Pakistan has only worsened over the previous decade. Despite the attempts by Federal and Provincial governments to mitigate power shortage, the rate of expansion far exceeds growth in the power supply. Solar power solutions have long been recognized as frivolously expensive, and justly so. This text presents an effective, economical solution that facilitates effective dissemination of solar energy through specialized, mobile batteries. This implementation would bring solar energy within the affording range of the general consumer, in a vastly efficient incarnation. The developed framework is designed to function with greater potency in comparison with conventional systems, while remaining broadly accessible to consumers from all social sectors. In doing so, it presents a great opportunity for the investors to go big and at the same time, the masses in the underdeveloped areas will benefit from very inexpensive source of power for their house hold use.
