

## Worlds Top 10 Most Dangerous Sharks

**WORLDS MOST DEADLY SHARKS** In The Top 10 Most Deadly Sharks you will join us as we countdown the top 10 most dangerous sharks in our oceans. Sharks have survived since the day of the dinosaur. To have lived that long they have become expert hunters. In this book you will learn which sharks are known for attacking humans, as well as what may provoke a shark to attack. You will discover what makes sharks so interesting to watch, and why they are mostly misunderstood animals. You will learn the truth about sharks, why their numbers are dwindling and how you can help protect them. Do you know why the lemon shark is called the lemon shark? Hint it has nothing to do with fruit. Do you know how the bull shark got his name? You will learn this in chapter 11, and what makes the bull shark so deadly. Each chapter is filled with high quality shark pictures of the types of sharks we discuss. You will learn what sharks have for lunch, and why they sometimes mistake people for a quick meal. We also discuss several facts about sharks like where they live, and how large they grow. Not every shark discussed in this book is known for their aggressive behavior. You will learn about the gentle giant of the sharks as well, the whale shark, and why it is not a threat to people. As you read through the pages, you will discover what scientists believe was the largest shark to have ever lived in our ocean, and that some believe they still survive in the deepest part of the sea. Personal Note from the Author: I have been fascinated by sharks since I was young. I started watching shark week on the discovery channel when I was 8, and never stopped reading, watching and researching these animals. My son, Scottie, has become very interested in these creatures as well. Now we both love researching shark.
