

In the original formulation of quantum mechanics the existence of a precise border between a microscopic world, governed by quantum mechanics, and a macroscopic world, described by classical mechanics was assumed. Modern theoretical and experimental physics has moved that border several times, carefully investigating its definition and making available to observation larger and larger quantum systems. The present book examines a paradigmatic case of the transition from quantum to classical behavior: A quantum particle is revealed in a tracking chamber as a trajectory obeying the laws of classical mechanics. The authors provide here a purely quantum-mechanical description of this behavior, thus helping to illuminate the nature of the border between the quantum and the classical.

Gabler Lexikon Werbung (German Edition), The wheat problem, based on remarks made in the presidential address to the British association at Bristol in 1898: revised with an answer to various critics, Great Home Runs of the 20th Century, Political Economy: Institutions, Competition and Representation: Proceedings of the Seventh International Symposium in Economic Theory and ... Symposia in Economic Theory and Econometrics), #MovingOn: The Fifth Graders Guide to Junior High, The Pequots (Watts Library), Disgusting Body Facts, Political aphorisms: or, The true maxims of government displayed Wherein is likewise proved, that paternal authority is no absolute authority, and that Adam had no such authority. (1691),
