

Tile Drainage: Why Tile Drainage Benefits Wet Land and Increases Farm Income (Classic Reprint)

The Bio-Engineering Aspects of Agricultural Drainage reports describe the results of a unique interagency study of the occurrence of nitrogen and nitrogen removal treatment of subsurface agricultural wastewaters of the San Joaquin Valley, California. The three principal agencies involved in the study are the Water Quality Office of the Environmental Protection Agency, the United States Bureau of Reclamation, and the California Department of Water Resources. Inquiries pertaining to the Bio-Engineering Aspects of Agricultural Drainage reports should be directed to the author agency, but may be directed to any one of the three principal agencies. THE REPORTS It is planned that a series of twelve reports will be issued describing the results of the interagency study. There will be a summary report covering all phases of the study. A group of four reports will be prepared on the phase of the study related to predictions of subsurface agricultural wastewater quality one report by each of the three agencies, and a summary of the three reports. A another group of four reports will be prepared on the treatment methods studied and on the biostimulatory testing of the treatment plant effluent. There will be three basic reports and a summary of the three reports. This report, NUTRIENTS FROM TILE DRAIN SYSTEMS, is one of the three basic reports of this group. The other three planned reports will cover (1) techniques to reduce nitrogen during transport or storage, (2) possibilities for reducing nitrogen on the farm, and (3) desalination of subsurface agricultural wastewaters. (Typographical errors above are due to OCR software and do not occur in the book.) About the Publisher Forgotten Books is a publisher of historical writings, such as: Philosophy, Classics, Science, Religion, History, Folklore and Mythology.
